

Roche have had an association with SVM QLD PTY LTD for several years, initially to carry out the Toyota Troop Carrier third door conversion for forward facing seats.

The quality of work produced by SVM has given us confidence to expand their services in the build of all our light vehicles in the Eastern region to comply with the specifications required for our Open Cut and Underground Mining operations.

SVM freely offer technical advice for product improvement and co-ordinate any subcontractors for special requirements, eg fire suppression.

Additionally, we are in an environment of short lead times and sometimes place unrealistic demands to satisfy our clients needs, SVM have at all times managed to accommodate Roche with a detailed schedule of work and regular feed back on progress.

Roche have endeavoured to find a “one stop shop” that consistently maintains a high standard of workmanship, understands our requirements and delivery expectations in the most cost effective manner. SVM QLD PTY LTD has met this requirement.
